1.0 IMPORTANT NOTICE & INTRODUCTION

IMPORTANT NOTICE

Please read before attempting service

1. While the monitor is in operation, do not attempt to connect or disconnect any wires.
2. Make sure the power cord is disconnected before replacing any parts in the monitor.
3. When the power is on, do not attempt to short any portion of the circuit. This shorting may cause damage to the transistors in the monitor.
4. When servicing the H.V. area, be certain that the C.R.T anode is safely discharged before removing the anode cap.
5. Caution must be exercised when servicing this monitor.

INTRODUCTION

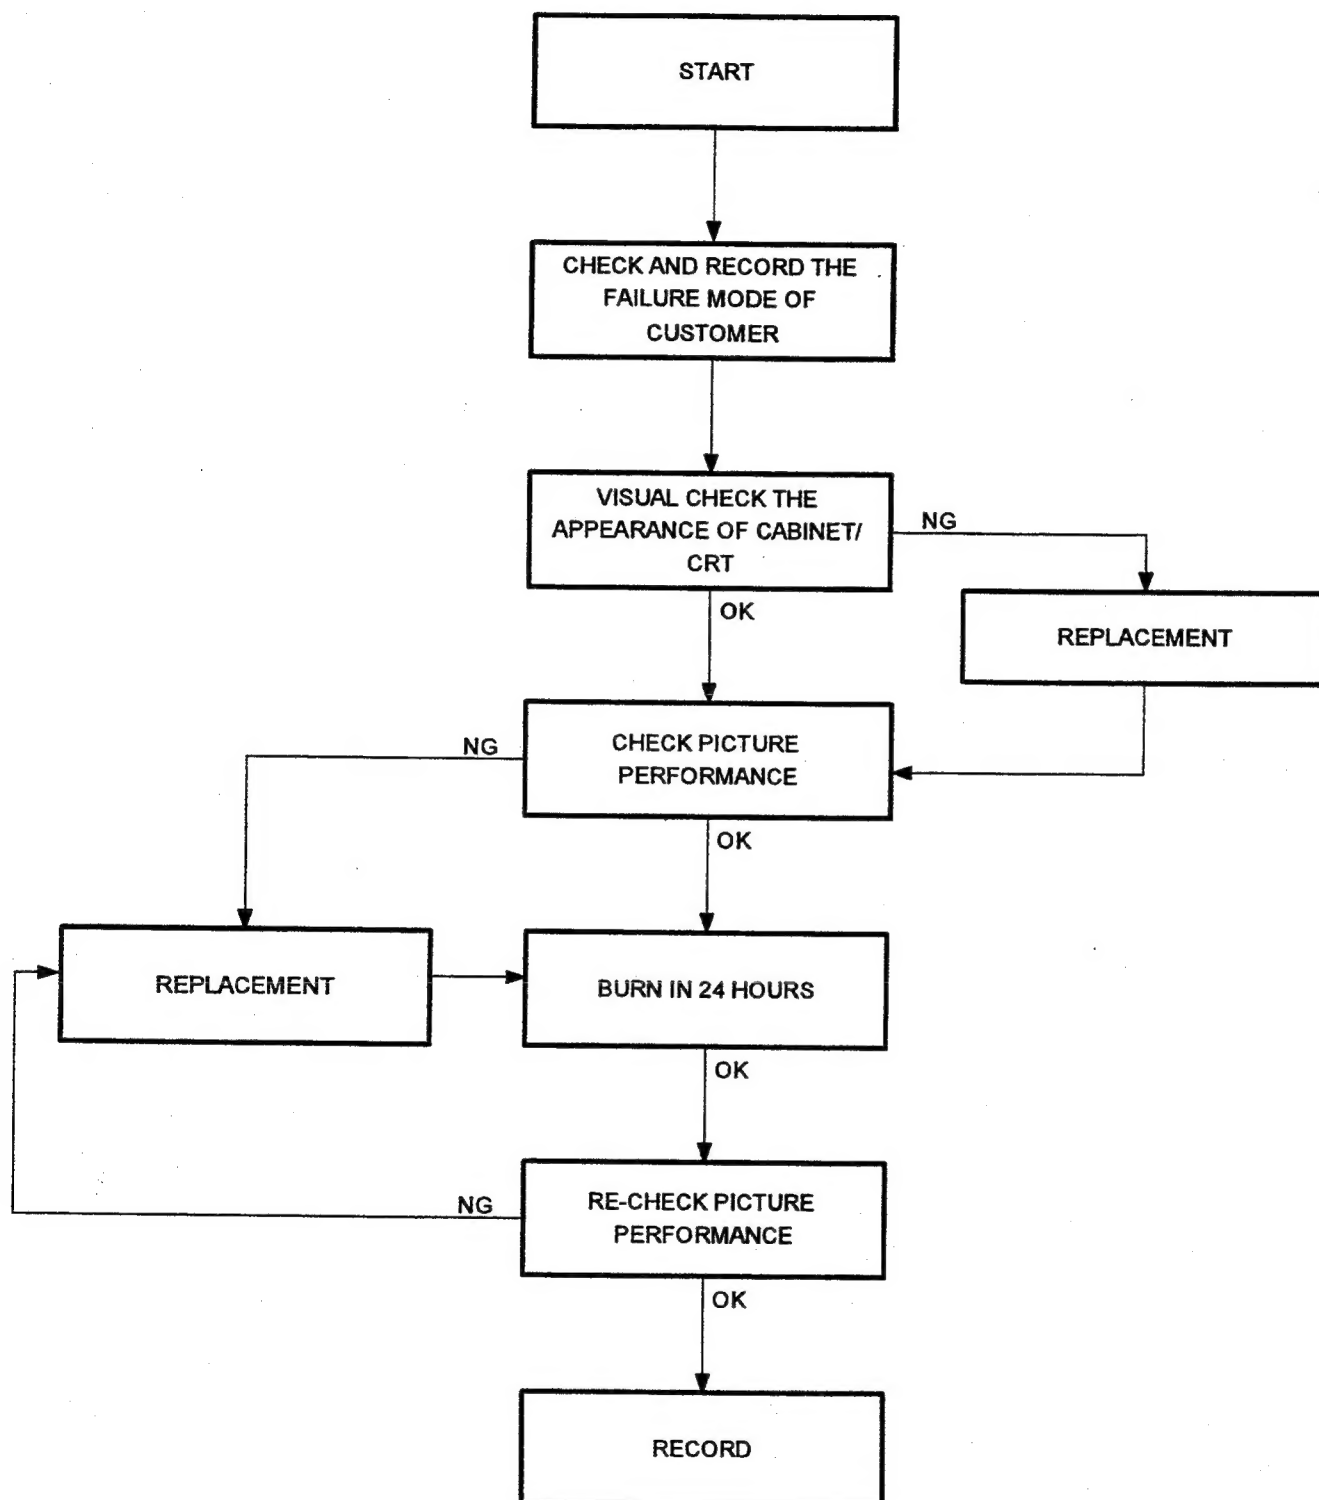

Enhanced repair capabilities

This troubleshooting guide is edited for model 1565D when service is necessary. There are four primary parts included in this troubleshooting guide which offer the easiest way to locate problem points and repair the machine to the best possible condition.

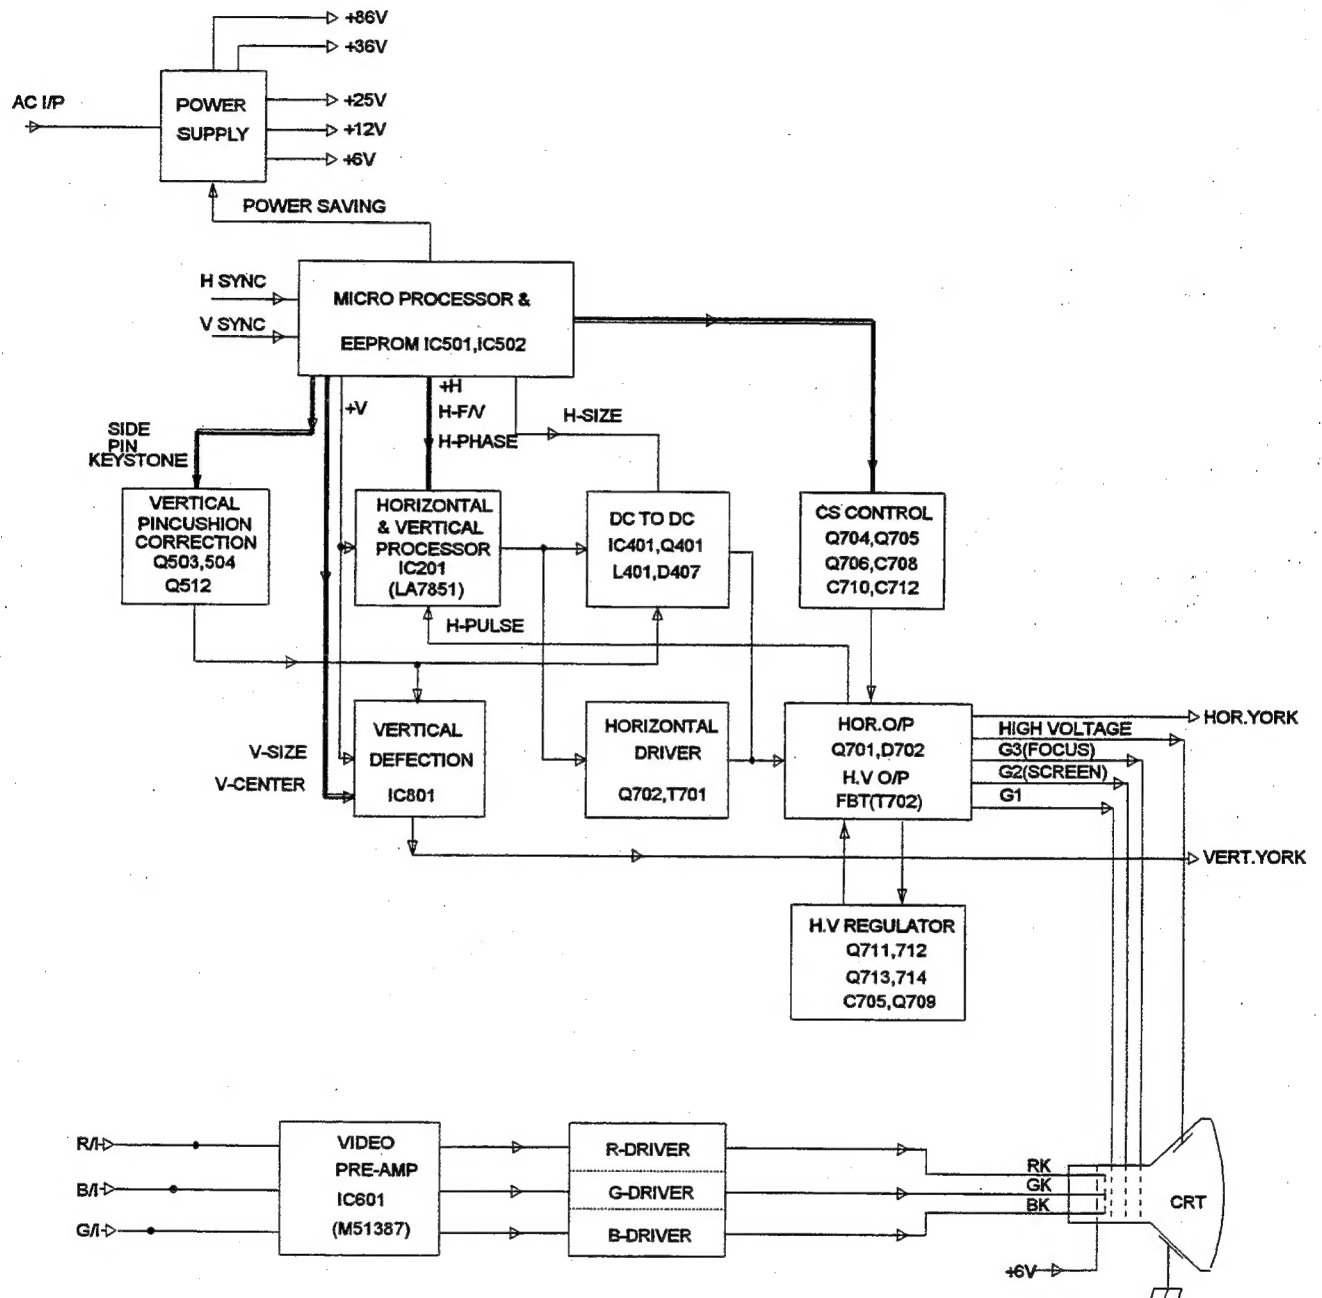

1. The Adjustment section offers the adjustable method, steps and all data of the factory's initial settings which can make the machine get the best performance at that time. By the way, before adjusting, the machine must be warmed up for at least 10 minutes and the CRT face must be in an eastward direction.
2. The Troubleshooting section has four main parts including: power supply, power saving, CRT, deflection & video circuit. Each offers fast repair routine and the IC, transistor voltage records against all specified signal modes. These voltage readings are measured with a HP 34401A multimeter with input impedance $10\text{M}\Omega$ (0.1V~1000V range) and waveforms shown on circuit schematics are measured by a Tektronix TDS 520 digital oscilloscope, the monitor receives VGA-480 full white square pattern.

3. The CRT contrast list offers repairmen / technicians the contrast data when CRT replacement is necessary from a different type of CRT.
4. The Spare parts list offers the CTX part number (P/N) which is used frequently by repairmen / technicians. For details please refer to the service guide or service manual. If there is any engineering change regarding this model, CTX will issue the updated information by a non-periodical Technical Bulletin.

2.0 GENERAL MAINTENANCE PROCEDURE

5.0 ADJUSTMENT

5.1 1565D ADJUSTMENT

- voltage adjustment:** VR101,VR102 / VGA-480

1. Use VGA-480 timing for input signal.
2. Attach the multimeter (with a DC voltage range of 200V) adjust VR101 to get $85.5V \pm 0.5V$ at TP1.
3. Adjust VR102 to get $12V \pm 0.05V$ at TP2.

- Hi-voltage adjustment:** VR702 / VGA-480

- a. Turn the power switch off before attaching multimeter with a high voltage probe by a factor 1000:1 between CRT anode and GND.
- b. Adjust VR702 to make sure the measurement readings are $25.0V \pm 0.2V$ (ie CRT anode voltage is $25.0KV \pm 0.2KV$).

- Horizontal hold adjustment:** VR201,VR202

- a. Connect TP4 to GND and adjust VR202 to get picture stand or scroll toward left or right slowly when input is 8514A timing signal.
- b. Change input timing to VESA1024 and adjust VR201 to get picture stand.

- H-PHASE adjustment:** EXT SW / ALL MODE

Adjust EXTERNAL H-PHASE SW to shift picture to the center of screen, every mode.

- V-line adjustment:**VR801 / VESA1024

First adjust V-CENTER EXTERNAL VR to make picture to the V-center of the screen, and then adjust VR801 to correct the V-linearity of crosshatch pattern.

- H-WIDTH adjustment:** VR401 / VII1024

- a. Turn EXTERNAL H-WIDTH VR to min. position.
- b. Adjust VR401 to get the picture's width is $260 \pm 5mm$.

- V-SIZE adjustment:** EXT SW / ALL MODE

Adjust EXT V-SIZE SW to get vertical size of each mode is $202 \pm 5mm$.

- PARALLELOGRAM adjustment:** VR204 / ALL MODE

Adjust VR204 to get a picture that right edge parallel with left edge of each mode; which the spec. is $\pm 2mm$.

- FOCUS adjustment:** FOCUS VR / VGA-480

Adjust FOCUS VR on the FBT to attain a balanced focus for all zones on the screen.

- White balance adjustment:**

- a. Pre adj. & brightness settings (Before adjusting, CRT must be degaussed.)

(1) Please set the VR601, 602, 603, 604, 605, 606 on mechanical center, and the Brightness VR to the click point, the Contrast VR to Max..

(2) Operating on VGA-480 mosaic pattern and adjust the SCREEN VR to set the raster luminance between 1 ~ 2FL, then adjust VR604,605,606 (BIAS VR) to make the raster's C.I.E. coordinates value as $x=0.281 \pm 0.01$, $y=0.311 \pm 0.01$ were measured by color analyzer.

(3) Change timing to VGA-400 color bar pattern, correct SCREEN VR which on the FBT to make raster brightness disappear and the "1" row of color bar pattern (as below figure) visible obscurely.

		R+B		B+G		R+G		
Brightness		BRIGHT BLUE	BRIGHT RED	BRIGHT PURPLE	GREEN	BLUE + GREEN	RED + YELLOW	WHITE
	15							7
	14							6
	13							5
	12							4
	11							3
	10							2 → visible
	9							1 → visible
	8							0 obscurely

b. White balance fine regulation:

- (1) Receive VGA-480 timing, full white square pattern.
- (2) Adjust Brightness VR. to MIN., Contrast VR. to MAX.
- (3) Adjust VR601,602,603 to make picture C.I.E. coordinates value as $x=0.281 \pm 0.01$, $y=0.311 \pm 0.01$, were measured by color Analyzer.
- (4) Change the BRIT. VR to the click point and adjust the CONT. VR to make the luminance of picture between 1 ~ 2FL, then adjust VR604, 605, 606 (BIAS VR) to get $X=0.281 \pm 0.005$, $Y=0.311 \pm 0.005$, were measured by color Analyzer.
- (5) If the white balance is not met, repeat step (2) ~ (4).

Please set Brightness VR to click point and Contrast VR to Max., and check item (3) of Per adj & brightness settings, then receive VGA-480 mosaic pattern and check the luminance of Mosaic pattern is between 50 ~ 60FL. If above check item isn't meet, please modify VR601 ~ VR605 and return to white balance fine regulation section.

• ADJUSTMENT FOR CONVERGENCE

- (1) Use a magenta crosshatch on the display.
- (2) Adjust the focus for the best overall focus on the screen.
- (3) Also adjust the brightness to the desired condition.
- (4) Vertical red and blue lines are converged by varying the angle between the two tabs of the 4 pole magnets on the PCM assembly. (See diagram below)
- (5) Horizontal red and blue lines are converged by moving the two tabs at the same time keeping the angle between them constant.
- (6) Use a white crosshatch pattern on the display.
- (7) Vertical green and magenta lines are converged by varying the angle between the two tabs of the 6-pole magnets.

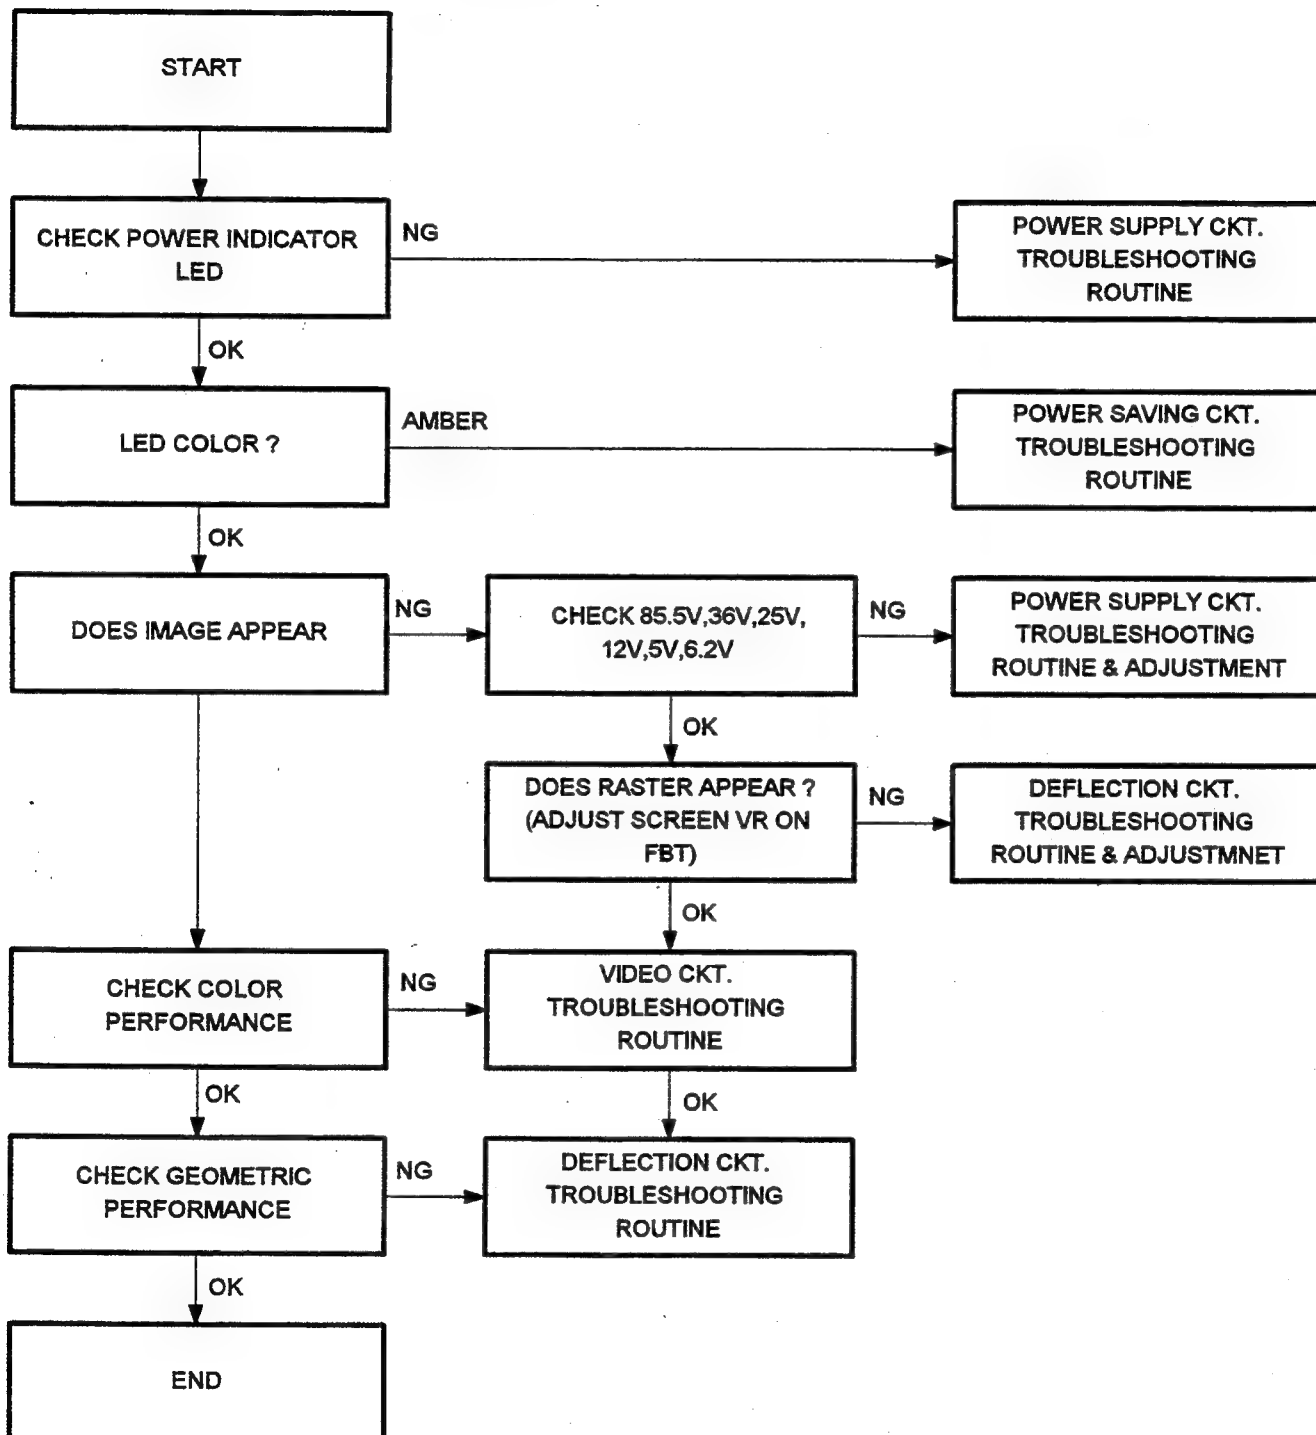

- (8) Horizontal green and magenta lines are converged by moving the two tabs at the same time. keeping the angle between them constant.

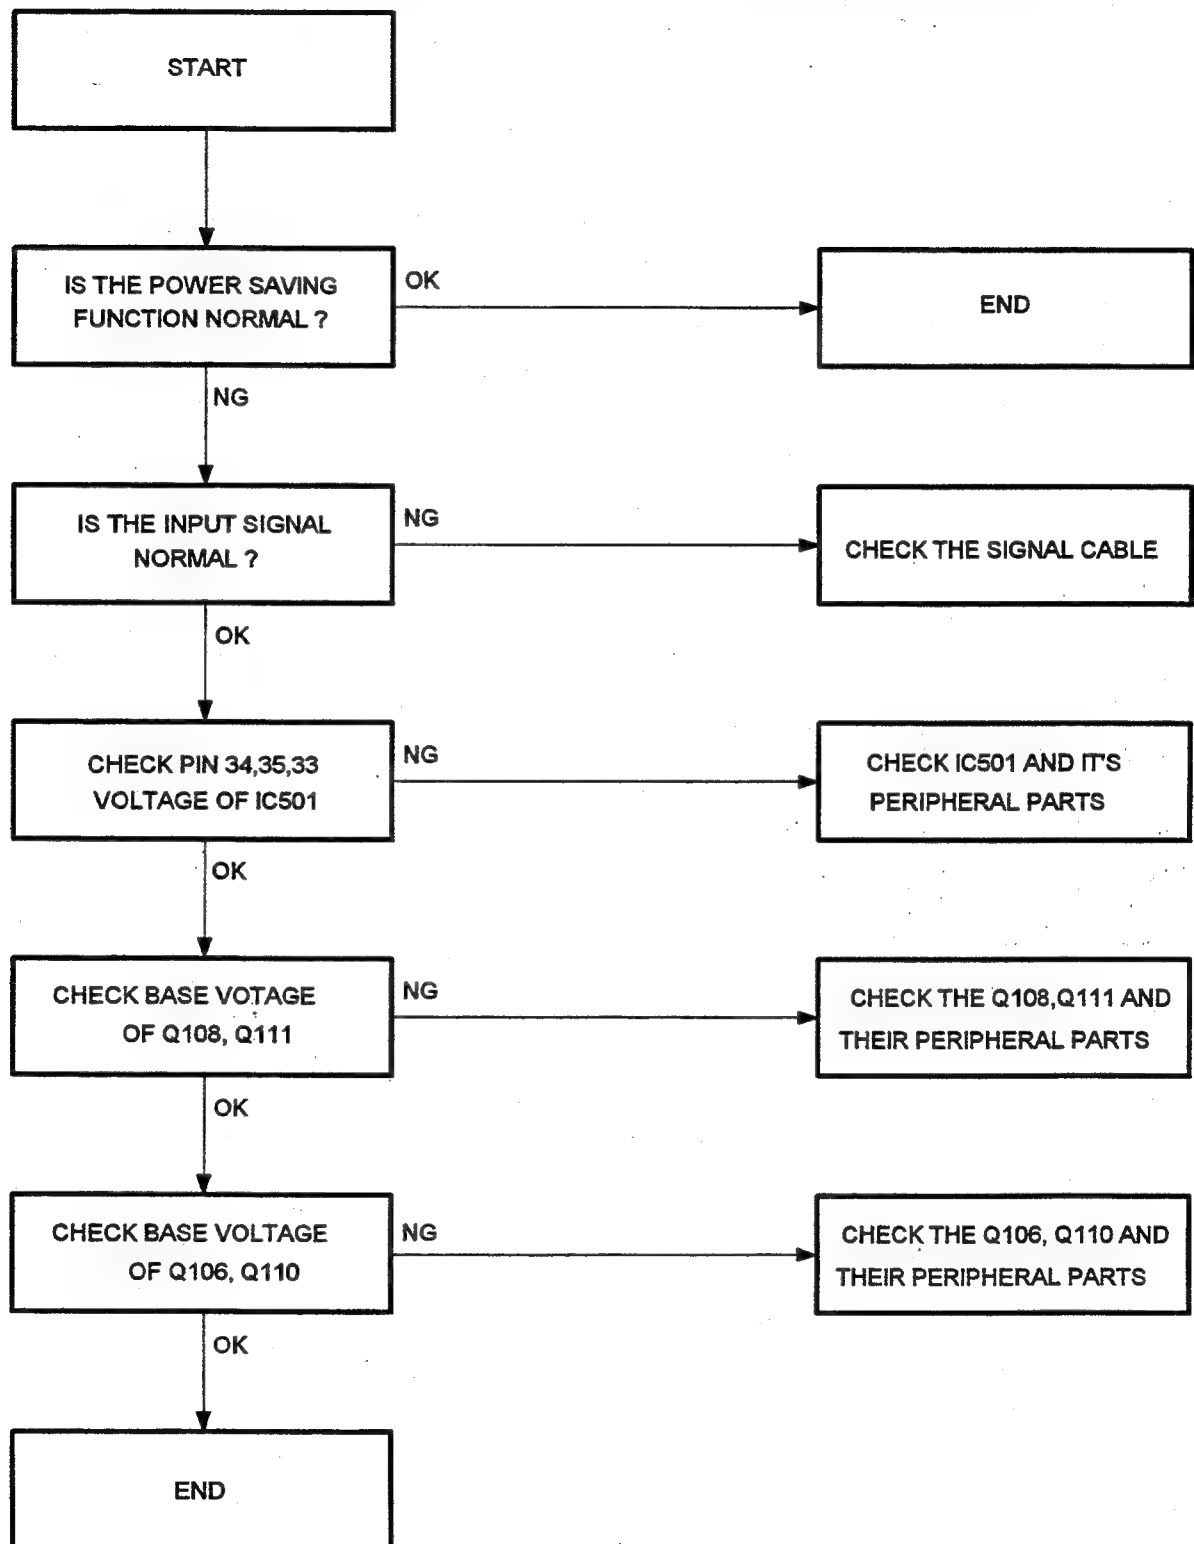

Note: Please don't adjust the purity magnets when service occurs.

11.0 CRT CONTRAST LIST

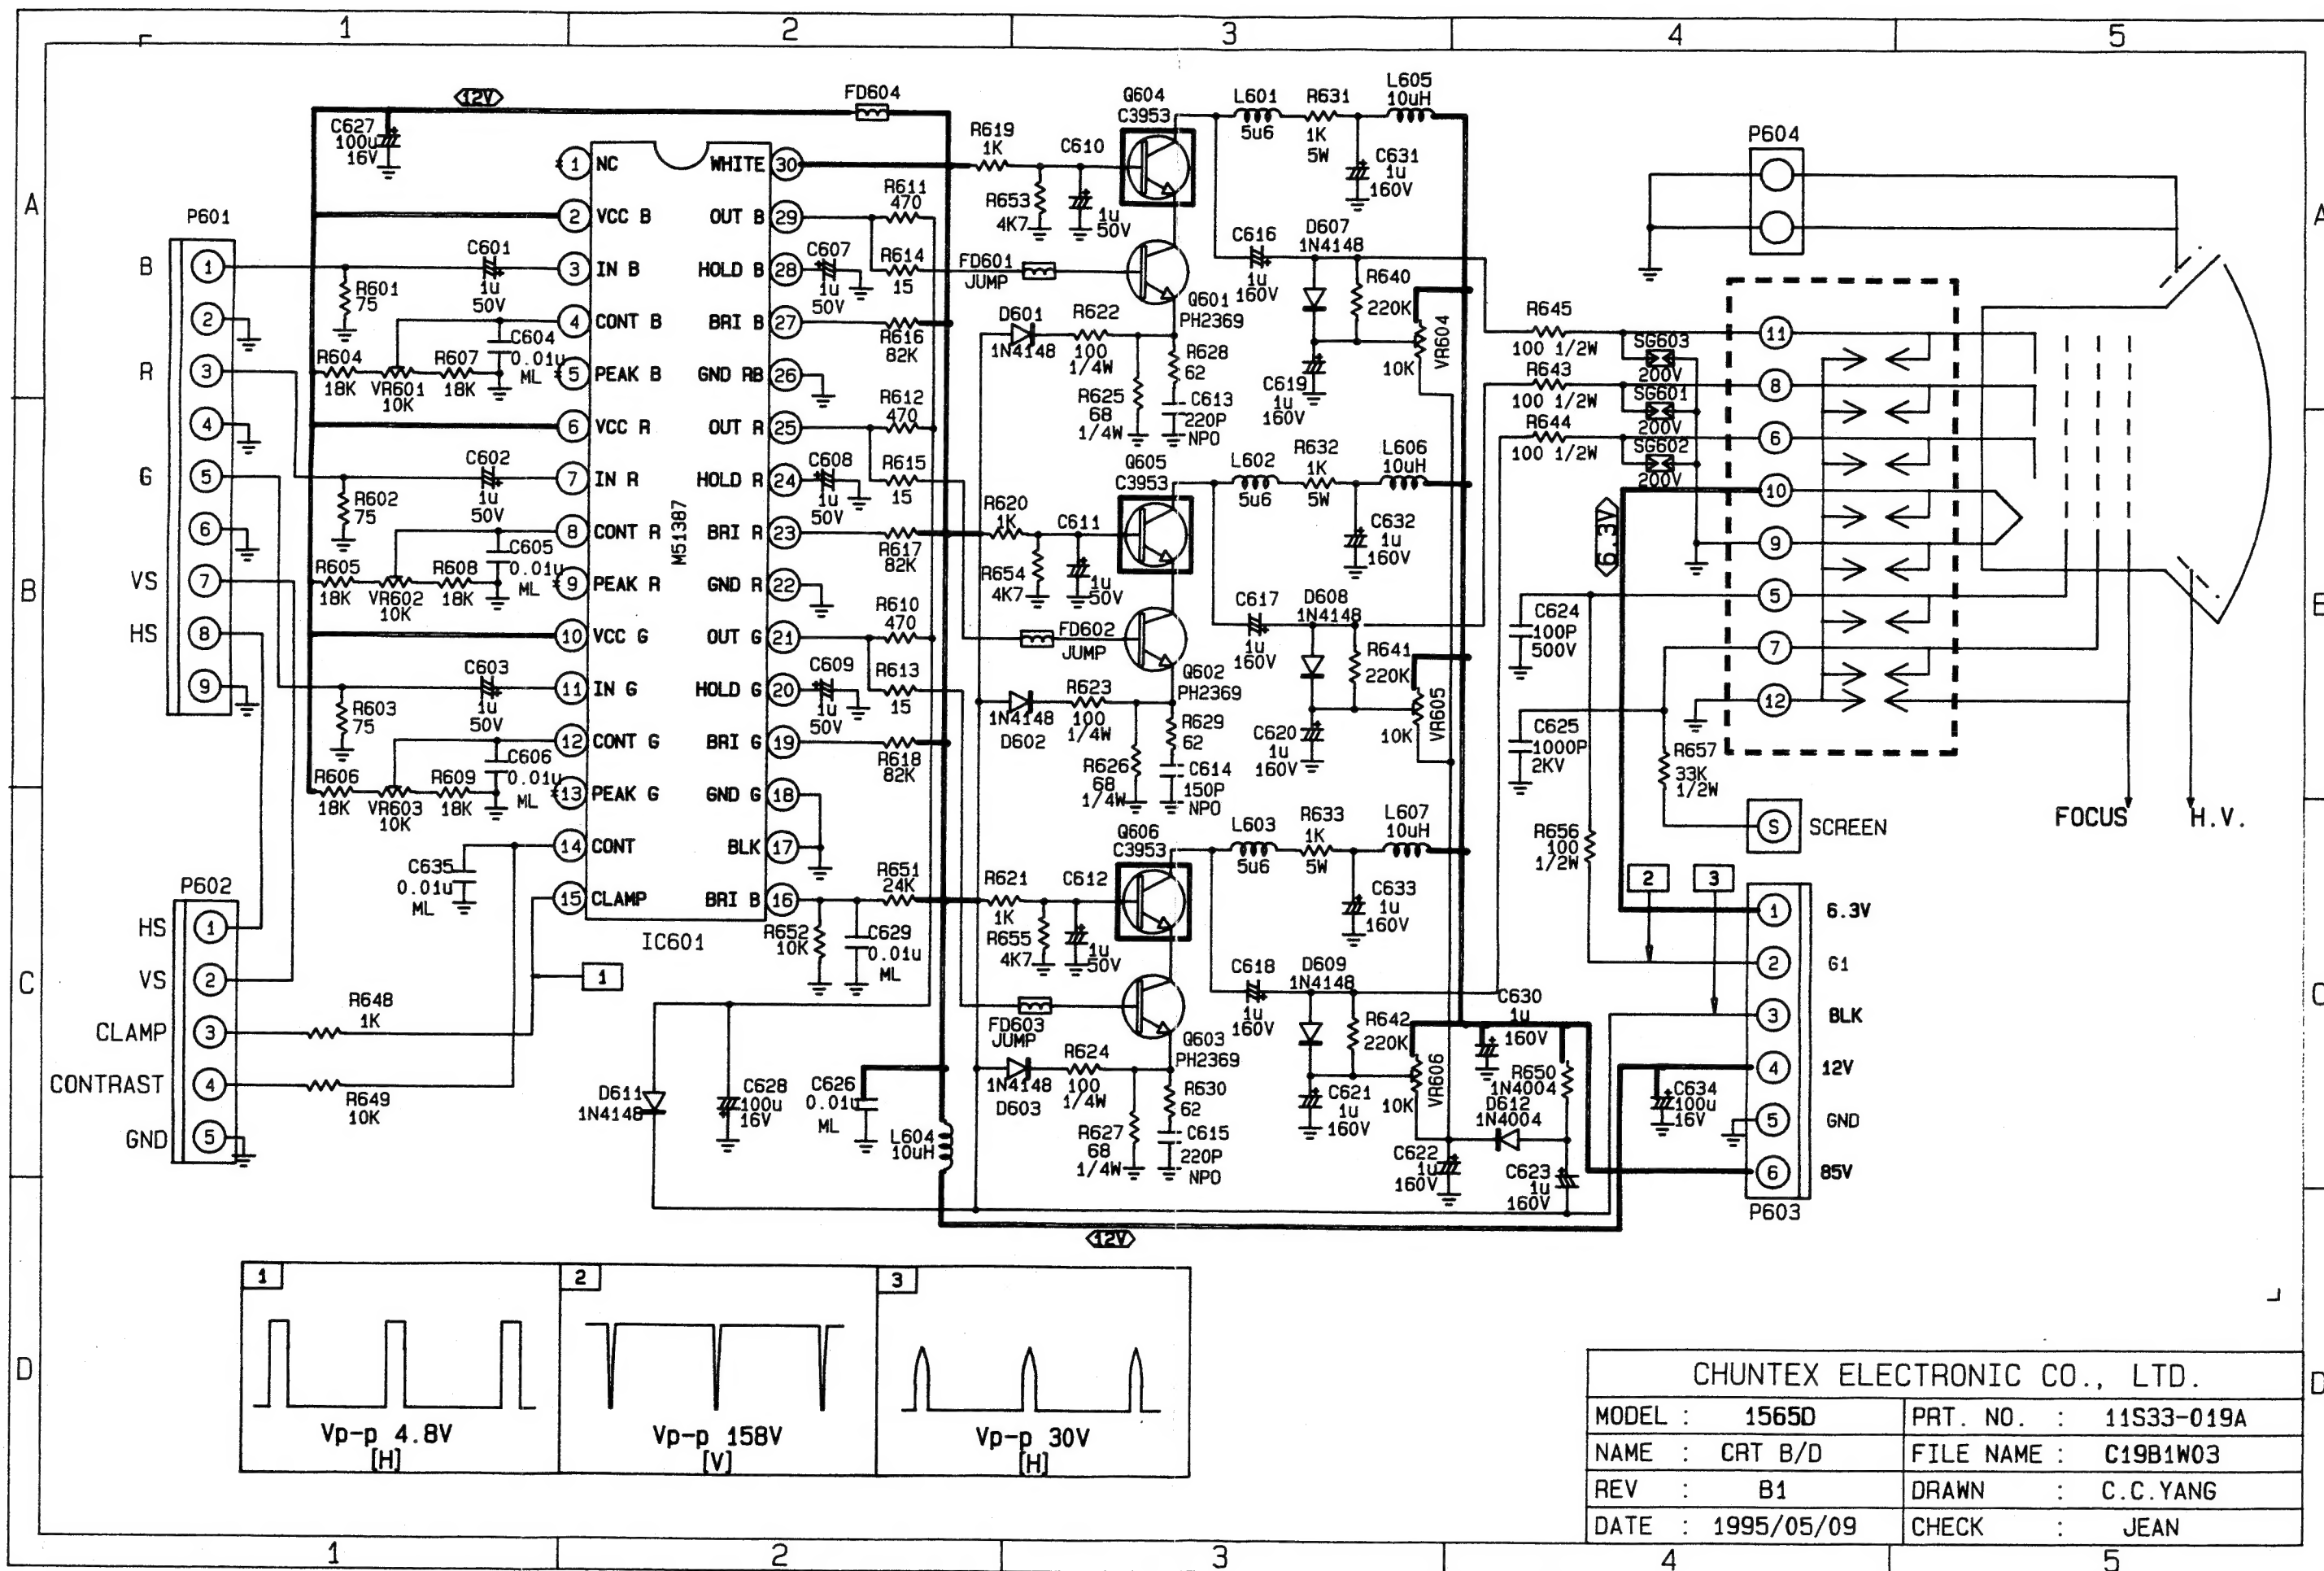

THE 1565D SERIES MONITOR HAVE SEVERAL KINDS OF CRTS AS BELOW.
THE DIFFERENT PARTS BETWEEN THEM IS SHOWN IN BELOW TABLE.

PART NO. PART NAME	CRT	PHILIPS 20H15-08AA M36EDR320X131/2F01	PANASONIC 20H15-11AC M36KPC030X01
R145		15Ω 1W 23245-1094	15MM JUMPER 54J05-150B
R412		270K 1/4W 5% 22225-274M	150K 1/4W 5% 22225-154M
R736		47K 1/4W 5% 22225-473M	20K 1/4W 5% 22225-203M
R737		120K 1/8W 5% 22215-123M	150K /18W 5% 22215-154M
R805		12K 1/8W 5% 22215-123M	9.1K 1/8W 5% 22215-912M
VR401		500Ω VR 25B20-501B	1K VR 25B20-102B
D109		SS00DD-012	SS00DD-013
C716		0.36μ 400V 35155H3647	0.33μ 400V 35155H3347

This image shows a full page of a document template. It consists of a series of evenly spaced, horizontal black lines on a white background, typical of lined paper used for writing or drawing. There are no margins, text, or other markings present.
